

IBM® hands over reins back to 4js

Irving, Texas – June 23, 2015 — IBM Informix Genero, an application development environment that helps customers create innovative database applications and modernize existing 4GL code, is a product IBM used to offer through an OEM relationship with Four Js.

To better serve clients and deliver the latest Genero enhancements to them in the most timely manner, IBM is entering a new delivery phase of this product.

Effective **September 1, 2015**, IBM will transfer the sale of Genero licenses to its OEM partner Four Js. Support for current Africa customers will be handed over to 4js certified partner iAdapt in an orderly manner but should be completed by **September 30, 2016**.

20 Year Four J's Africa veteran Reseller iAdapt, will again be available to assist IBM Licensed sites with Support and Maintenance including renewals of Contracts.

IBM considers Genero to be the best path forward for customers wishing to modernize Informix 4GL applications.

IBM and Four Js have agreed to provide a way for existing customers with IBM Informix Genero, who are currently enrolled in IBM support, to convert their IBM Informix Genero license and support to Four Js Genero. Four Js Genero is a functionally-equivalent product.

If a customer chooses to migrate to Four Js Genero, their licenses will be traded in free of charge and replaced with the equivalent Genero licenses. After converting, a customer will be under the Four Js Software License Agreement for these licenses.

Once migrated, new licenses of Four Js Genero can be purchased from iAdapt.

This offer to migrate to Four Js' products free of charge expires when the client's support terminates, either due to reaching the End of Service date or due to reaching the end of their subscription and support with IBM.

Informix Genero will not be available for inclusion in any ASL, OEM or ELA contract after September 1, 2015. Such customers should contact iAdapt or Four Js.

IBM clients can find their iAdapt or Four Js contact by sending a request to info@iadapt.co.za or contacting their local office at <http://www.iadapt.co.za/contact.php>

IBM will make every effort to contact existing customers by email. Any customer who has not been contacted and wishes to take advantage of the conversion offer should contact their iAdapt representative immediately to make the necessary arrangements.

Issued with immediate effect by iAdapt Press Office
